That is one hell of an awesome map. I've not seen anyone use the epaosc.org mapping space.

The application here is perfect since the data relationship would be impossible to interpret otherwise. Well done.

The refresh is a little slow. Maybe because I'm behind the firewall here.

If interested, check out:

www.epaosc.org/haystack1

Across the top tool bar you will see 'map'. Click on that. Once the map loads, on the right middle under bookmarks, click on Haystack No.1 AUM. Like google earth, on the left, under layer visibility, select Haystack No.1 AUM and expand the layer by clicking on the triangle.

Turn on the gamma scans from days past or today. If you have today on, it should update every 5 minutes, so you can track progress. We are using 4 meter / probe combos. We have up to 180 acres to cover.

As we process other info, our sampling and Geoprobe data will be added.

Enjoy, comments welcome.

Forward as needed.
